

Fidelity Checklist for Noncontingent Reinforcement (NCR)-Access to tangible items

Protocol Component	Completed Correctly (Y/N or N/A)
1. Data sheets are accessible and appropriate information is entered	
2. BT/RBT confirms the correct phase for the session	
3. BT/RBT sets timer for the correct duration for the current phase	
4. When the timer goes off the BT/RBT immediately delivers the tangible for 30 seconds	
5. When the timer goes off the BT/RBT waits to finish a skill acquisition trial before delivering the tangible (this should be "no")	
6. If the client engaged in noncompliance when the timer goes off, the BT/RBT waited 30 seconds and then delivered 30 seconds of access to tangible item	
7. Timer is reset for next interval	
8. Occurrences of noncompliance are recorded on the data sheet	
9. Rate of noncompliance is calculated at the end of each day	
10. If phase change criterion is met, the BT/RBT makes a note in the session log to proceed to the next phase	
11. If the client has engaged in noncompliance at a rate of more than (enter criterion from behavior plan) per hour for two consecutive days, after passing phase 1, move back one phase	
Scoring instructions: count total number of "Y" and "N" (exclude any N/A) then take the total number of "Y" and divide by the total number of items that scored either Y/N and multiple by 100. $(Y / (\text{total y/n responses})) * 100$
